ROSE PRICE LIST

1949-1950

M. T. YOUNG

800 SOUTH LINCOLN STREET

TALLULAH, LOUISIANA

ROSES grown at Tallulah, Louisiana, usually are not sufficiently dormant for planting until the latter part of December. For this reason, plants will not be available until late December or early January.

Prices on all plants are \$1.00 each, or \$10.00 for 12. Postage paid on all orders amounting to \$10.00 or more. On orders for less than \$10.00, please include 50 cents for packing and postage.

Planting Instructions

Select fertile, well drained soil where no roses have been grown for two or more years. This should be located where the roses will be in full sunlight the greater part of the day and far enough distant from trees, hedges, shrubbery, or other plants so that the roots of these plants will not rob the roses of necessary plant food. Several months before planting, about one or two inches of manure should be dug into the soil. No other fertilizer should be added until August when two pounds of a complete fertilizer for each 100 square feet of area should be applied. Plants should be set two to three feet apart. Set the plants so the bud union will be one or two inches above the top of the soil after the bed has settled. The plants should be set on a mound in the center of the hole so that the roots extend out naturally at an angle of 30 to 45 degrees. The soil should be packed around the roots with the hands until the hole is about two-thirds full. Pour in a bucket of water; and after this has disappeared, fill the remainder of the hole and mound the soil over the plants for eight or ten inches. This mound should be removed about February 15 by pulling soil away from the bottom of the mounds.

HYBRID TEA ROSES

Name	Description
Betty Uprichard.....	Two-tone coral
Cathrine Kordes.....	Large blood-red
Christopher Stone.....	Bright velvety scarlet
Condesa de Sastago.....	Red and gold
